

SULFUR SOLIDS REMOVAL

OXYBRITE SB 5 is a stabilized, pH-adjusted 1.5% active hydrogen peroxide-based product designed for remediation of sulfur-bearing solids and odor problems by direct oxidation without severe corrosion issues while minimizing excessive gas production.

FEATURES AND BENEFITS

- pH-adjusted
- Low concentration of active ingredients
- Available at other active concentrations
- High pH-adjustment accelerates reaction time
- Dilute concentration reduces gas production and dramatic increases in temperature
- Non-hazardous and non-TDG regulated
- Spent solution requires no specialized handling procedures and can be sent directly for disposal

DIRECTIONS FOR USE

Area of application	Interior of tanks or vessels such as non-regenerative scavenging units or towers containing sulfur-bearing solids and severe odor emissions
Contamination to be removed	Iron polysulfides, polythionic acids, iron sulfides, pyrophoric iron sulfides and sulfide/sulfur-related odors.
Use procedure	Consult with your local West Penetone sales representative for procedures best suited for your application. Not recommended for vapour phase injection.
Concentration	For optimum results, use undiluted or up to 30% v/v with clean water as part of a full circulation or soak procedure.
Use temperature	To avoid excessive gas production, do not exceed 40°C (104°F).
Dwell time / Operation time	Dwell time may vary from 30 minutes to 6 hours depending on depth of foulant and degree of contamination. Monitoring for drops in active concentration is recommended.
