1882 – 2022

CN Disinfectant bottles  
(Chloro-Naphtholeum).  
Mythical product of the  
West Disinfecting Company,  
based on a formula brought from  
England by Robert S. West.

*Robert S. West*

# The History of West Penetone

Arriving directly from Cambridge in England, **Robert West** brought to our continent the formula for a coal tar-based disinfectant (CN Disinfectant). In 1882, he founded **West Disinfecting Company** in the United States, which then embarked on its business activities with this unique and promising product. *It was the start of a beautiful story.*

In 1925, **West Disinfecting** opened a plant in Montreal in order to better serve its Canadian customers. The company's reputation spread throughout the country and the significant growth it experienced led it to change its name. As of 1957, **West Disinfecting** became **West Chemical Products of Canada Ltd.**

In 1976, **West Chemical Products** acquired **Penetone Corporation**, a well-known company that had been present for 50 years in the field of industrial chemicals. In 1992, re-structuring gave birth to a new company name, **West Penetone Inc.**

In 2006, the company made another strategic acquisition in order to strengthen its presence and operations in Western Canada. The company in question, **R&M Chemicals**, had been working for over 40 years in the development and manufacture of high-quality industrial cleaning products.

2022 will be a pivotal year, not only for celebrations surrounding its 140<sup>th</sup> anniversary, but also for expansion. In March 2022, **West Penetone** acquires the Canadian company **Accuchem**. Based in Edmonton, Alberta and serving the Western Canadian market, **Accuchem** has been manufacturing industrial chemicals since 1993.

Always on the lookout for new opportunities, **West Penetone** intends to make significant new acquisitions in the coming months.

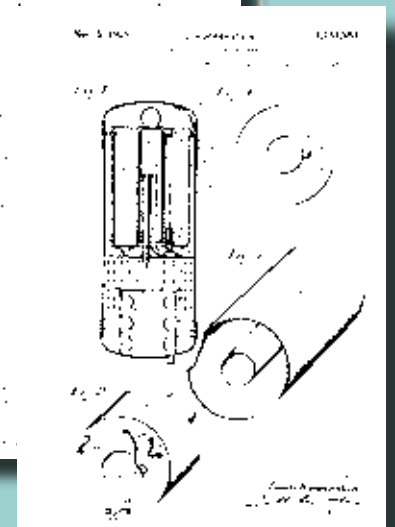

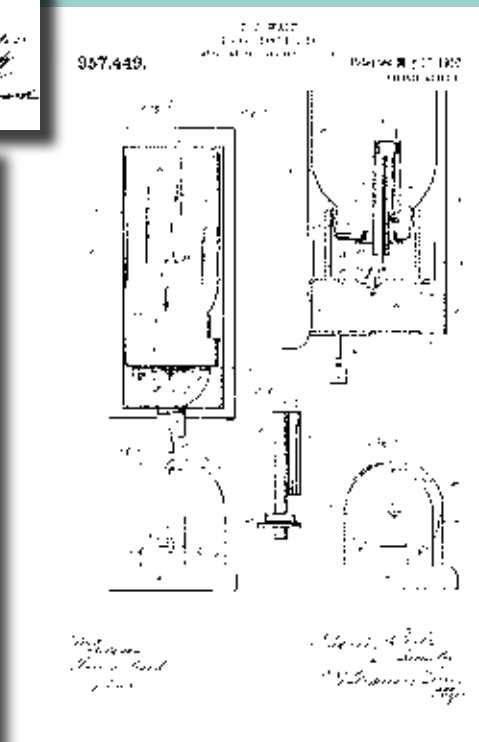

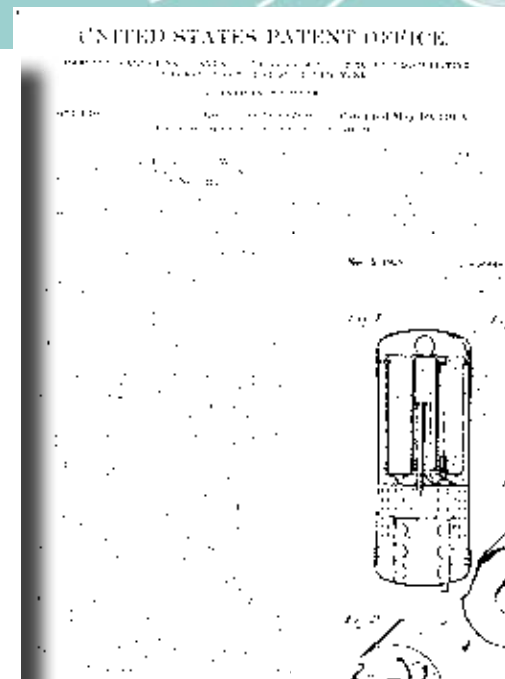

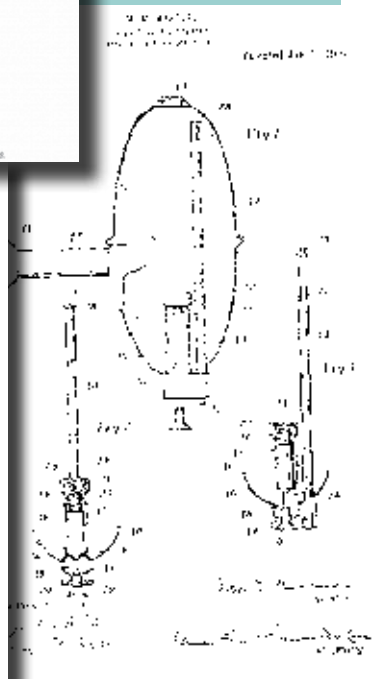

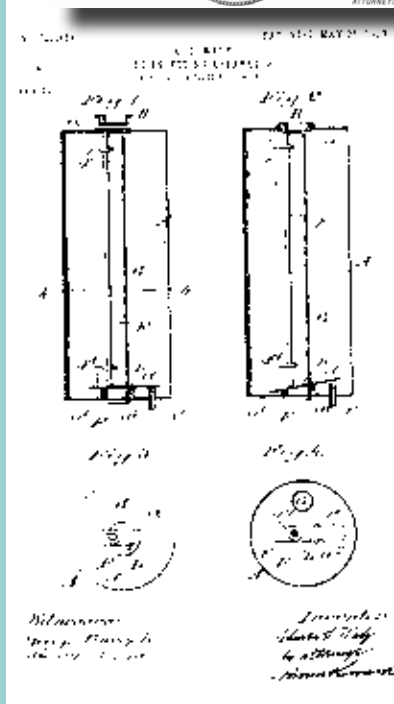

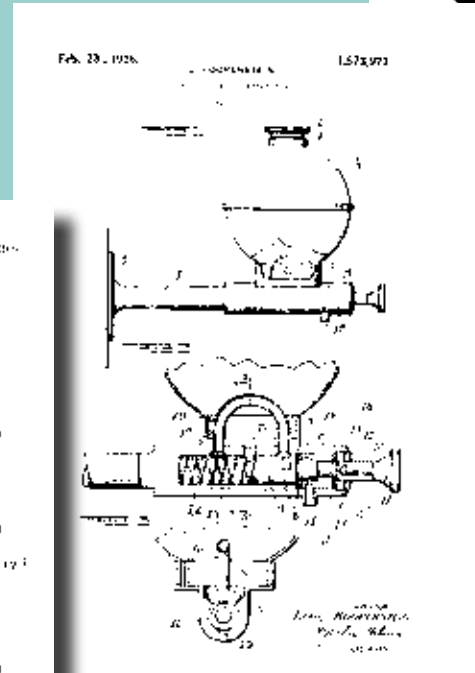

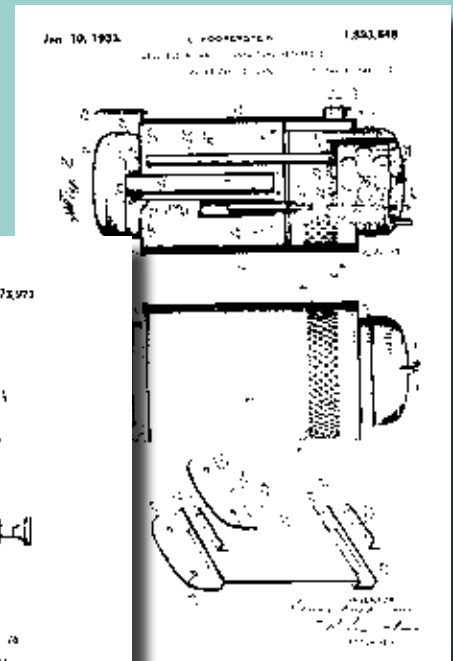

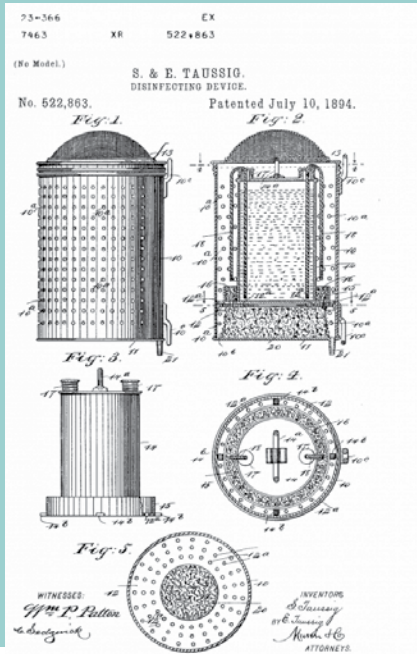

These activities will substantially strengthen **West's** presence at the national level.

Constantly growing and with the wind in its sails, **West Penetone** continues to expand, always seeking to develop new products for emerging markets.

The company's strength is still the excellence of the services it provides to its customer base.

# INVENTORS OF DISPENSERS

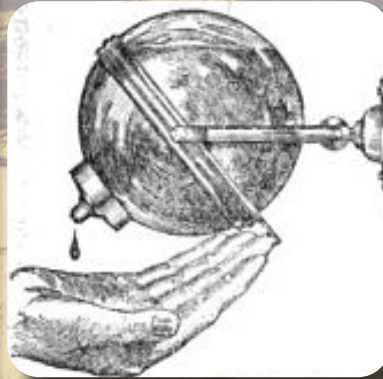

# INVENTORS OF DISPENSERS

In the early 1900s, the **West Disinfecting Company** developed many dispensers for their products.

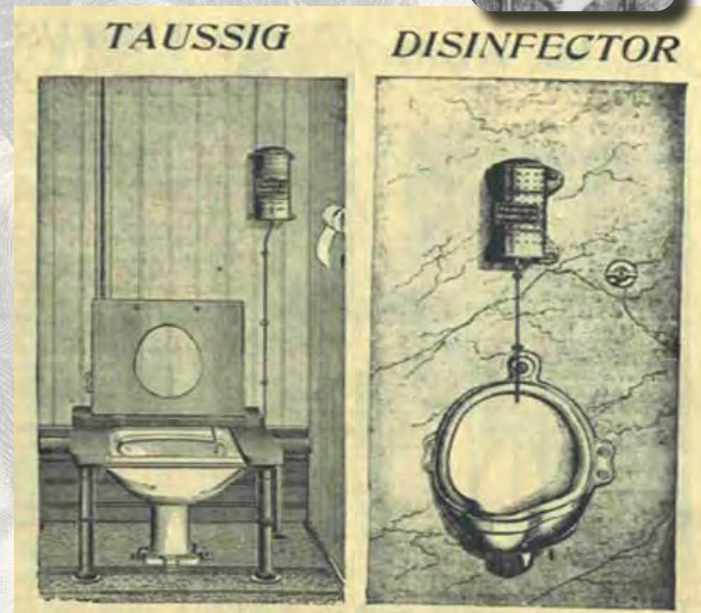

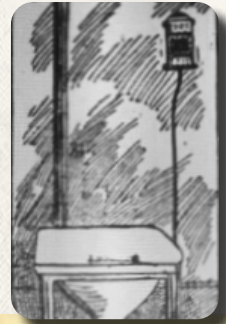

Among the most popular are the sanitizer diffuser and the liquid hand soap dispenser called "**Beau Brummel**".

# INNOVATORS

Emil Taussig, one of the directors of the **West Disinfecting Company**, was credited as the inventor of one of, if not the first, automated toilet sanitizer. The device was filled with disinfectant which would drip slowly into the bowl or urinal.

As early as the 1920s, women could buy Kotex sanitary pads from **West Disinfecting Company** dispensers. **West** will be their exclusive distributor for several years.

**Women appreciate this service**

The ready availability of Kotex® in your washrooms is every bit as important as soap and towels. And from the standpoint of preference—more women choose Kotex than all other sanitary napkins combined.

The convenient rest room vendor holds 15 individually wrapped Kotex napkins, packaged under the highest degree of sanitation. Each package contains two pins. Trolls supplied in cartons of 200.

The Kotex vendor is a highly appreciated service in schools, colleges, theaters, hotels, restaurants, office buildings, factories—for women everywhere.

- Sturdy
- Handmade, White Brunei
- Tamperproof
- Inexpensive
- Occupies Minimum Wall Space
- Fully Coin-Operated (injects slugs, washers without requiring mechanism)

Only West Disinfecting Company is licensed to sell the Kotex vending machine service. Write for complete details.

## CHLORO-NAPHTHOLEUM

Takes the place of the dangerous and poisonous carbolic acid—and has a greater value as an antiseptic than most preparations now on the market.

It is manufactured under the best of chemical supervision in our own laboratory—is uniform in quality and strength, and unexcelled in germicidal properties.

NON-POISONOUS

SURE PROTECTION

**CHLORO-NAPHTHOLEUM**

For Therapeutic uses and the sterilization of skin or mucous membranes prior to surgical operations, it makes an ideal agent.

As a wash or dip it is an unfailing remedy for lice, mange, itch, ticks and parasites generally in horses, cattle, sheep, swine, dogs and poultry.

Its non-poisonous properties make it a safe preparation for veterinarians to have in the hands of patrons.

8-ounce sample bottle free to veterinarians on request. Sold by dealers or direct by

**WEST DISINFECTING CO., 26 E. 59th St., NEW YORK**

## Chloro-Naphtholeum is King

Of antiseptics and disinfectants. It is more than a substitute for Carbolic Acid—better because it gives the same results, without having the dangerous qualities, being neither corrosive nor poisonous. It is not only Perfect as a Disinfectant, but

### Potent as a Deodorizer and Positive as an Antiseptic

It is receiving the highest endorsements from Boards of Education, Hospitals, and Managers of Factories and Transportation Companies as the Ideal and Economical preserver of Perfect Sanitary conditions. It is useful

- To **SURGEONS**—whenever an antiseptic is required.
- To **NURSERYMEN** and **GARDENERS**—for destroying insect pests.
- To **RANCHMEN**—as the best sheep-dip ever discovered.
- To **STOCKMEN**—as a certain cure for cholera among hogs.
- To **HORSEMEN**—for the treatment of shoulder and gall sores.
- To **LIVERYMEN**—as a neutralizer of "ammonia effect" on varnish.
- To **HOUSEKEEPERS**—in the care of cellars, sinks and closets.

In a word, **CHLORO-NAPHTHOLEUM** is a perfect safeguard against disease germs and sewer gas. Mikro-organisms and insects are unable to withstand it. It is guaranteed to be **non-corrosive** and **non-poisonous**; therefore it will not harm vegetable life and it will not injure plumbing. Properly reduced, it costs but one and one-half cents per gallon.

### The Taussig Automatic Disinfecting Device

(Over 50,000 in Use in the U. S.)

It is a neat and complete attachment for indoor Closets to be fastened to the wall above the Closet and the material supplied directly to the bowl by means of a small tube. It renders the condition of the Toilet **absolutely sanitary**. We are supplying our **CHLORO-NAPHTHOLEUM** and Machines to the leading County and State Institutions in **EVERY STATE IN THE UNION**. Agents in all the principal Cities. Testimonials by the hundred.

If you are interested, send for printed matter and prices.

One Dispenser and half-gallon of Beau Brummell Liquid Soap \$4.50

## WHICH— CLEAN OR DIRTY SOAP?

Don't use cake soap that carries in its spongy surface dirt, and possibly contagion, from one person to another. Throw away the old-fashioned disease-spreading, filthy-reeking cake soap. The age has outlived it.

## The Beau Brummell Liquid Soap Dispenser

tilts into the palm a few drops of pure vegetable oil soap that has never been used before.

## The House Fly Causes Death

THE fly carries the germs of typhoid, tuberculosis and other infectious diseases from objectionable filth to the food that you eat, to the baby's milk bottle, and drops germs wherever it alights.

One fly carries enough disease germs to wipe out a regiment. Flies have caused more deaths than all the battles of history. The germs they have brought have caused sickness and death to some member of your family in the past. They may cause death in the future.

Remember that flies lay their eggs only in objectionable filth; that they are attracted by foul odors—shun clean odors.

Screens are small protection. The way to keep flies from your home and to aid in their final extermination is to use an effective disinfectant in all refuse, garbage pails, manure, etc. C-N is the standard disinfectant, guaranteed on every label and in voice to be five times stronger than pure carbolic acid, but non-poisonous.

Where C-N Disinfectant is used, flies and insects will not enter—cannot abide the cleanly odor of C-N. C-N keeps your home free from vermin, free from disease germs, pure—clean and healthful.

## BATTLE OF BRANDYWINE CREEK

### ... a dramatic episode in the West campaign against delay

On August 9th, 1942, Brandywine Creek overflowed its banks and flooded the property of the Lukens Steel Company in Coatesville, Pennsylvania. After the waters receded, in addition to the immediate danger of a serious epidemic, months of man-power delay was threatened in this, the home of the world's largest plate mill, because of filth, muck and mud. • Trouble shooters of the West Disinfecting Company helped to prevent this delay. Roadways, buildings and material were thoroughly disinfected. Drinking fountains were made sterile and even files and records were salvaged. All this was started less than one hour after the flood had receded ... and sick absenteeism was prevented almost completely. • West's regular service to industry and institutions while less dramatic is no less important. Learn for yourself how West can help you to promote health ... INCREASE PRODUCTION.

## CHLORO-NAPHTHOLEUM

The Great Disinfectant and  
Unequalled Veterinary Fluid

A True Antiseptic and Healer.

USED AND RECOMMENDED BY VETERINARIANS  
EVERYWHERE.

**SURE CURE FOR MANGE  
AND LICE**

AN EXCELLENT DRESSING FOR SORES  
AND WOUNDS.

For general disinfecting purposes,  
Chloro-Naphtholeum can be diluted for use—100 parts  
water, and if used about stables and kennels it will  
keep them in a pure and healthy condition,  
and prevent the introduction and  
spread of disease.

We especially desire to call the attention of "Veterinary Surgeons"  
to this preparation and will cheerfully furnish samples  
to anyone wishing to test it.

# TRAGEDY STRIKES

Emil Taussig, who had his own company, distributed products manufactured by **West**. He had also invented devices that could contain disinfectant, intended to eliminate unpleasant odors, especially in bathrooms. In accordance with an agreement dated August 4, 1898, Emil Taussig of E. Taussig & Co. purchased from Robert West all interest, including patents and trademarks, in both his automatic disinfectors and chloro-naphtholeum. Emil Taussig served as president of the **West Disinfecting Company** until his untimely death.

Following a visit to Vienna, the Taussigs boarded the **Titanic** at Southampton as first class passengers in cabin E67.

On the night of the sinking the Taussigs were reportedly alerted to the danger by German steward Alfred Theissinger, he telling them "You better put on your lifebelts and rush out on deck." "Is it as serious as all that?" asked Mr Taussig. "Yes, hurry" was Theissinger's reply. Mr Taussig escorted his wife Tillie and daughter Ruth to a lifeboat (number 8) before standing back.

He was lost in the sinking and his body, if recovered, was never identified. Tillie Taussig and her daughter Ruth went back home to New York.

*Emil & Tillie Taussig*

## TITANIC'S LOSS ADDS TO VICTIM'S ESTATE

**Demand for Lifeboats Increased  
It \$2,000 Because of His  
Friend's Foresight.**

## NEVER FOUND HIS BODY

**Concern Which Had Done No Justice  
for Five Years Is Active  
After the Disaster.**

The appraisal of the estate of Emil Taussig, former President of the West Disinfecting Company, who perished when the Titanic sank on April 15, 1912, was filed yesterday. The total assets are \$205,540.45, consisting of \$109.44 in banks, 164 shares of the stock of the West Disinfecting Company valued at \$207,400, and 63 shares of the preferred stock and 165 shares of the common stock of the Englishhardt Collapsible Life Boat Company, sold for \$2,000. Deductions from the total estate left a net estate of \$205,540.45.

Interesting testimony concerning Mr. Taussig's holdings of stock in the Englishhardt Collapsible Life Boat Company was given before the Appraiser by Herman Mandelbaum, the executor under his will and a business associate. Mr. Mandelbaum said that for five years previous to 1912 the company had ceased to do business and the stock had become apparently worthless. When, as a friend and executor under his will, Mr. Mandelbaum went to Halifax to endeavor to recover the body of Mr. Taussig, he saw in the disaster in which his friend perished an opportunity to increase the value of his holdings in the lifeboat company.

In preparation for the demand for lifeboats which Mandelbaum saw would follow the disaster he persuaded the Englishhardt Company to re-enter the manufacturing field. This was done and the company prospered to such an extent that in September of the same year, the organizer of the firm bought back the Taussig estate's holdings in the company for \$2,000.

Mr. Taussig's holdings of stock in the West Disinfecting Company, along with sixteen shares held by his wife, Mrs.

Tillie Taussig, and twenty-three shares held by Morris Lang, Alfred Barch, and Sarah Demmer, Mr. Mandelbaum transferred to Moses M. Marcus, under an agreement which called for the payment of \$181,500 in cash, \$10,000 in three promissory notes, and an annuity of \$12,500 for five years to Mrs. Tillie Taussig.

The promissory notes, which were made payable on dates appearing by two years, it was provided in the contract of sale, should be paid immediately if the company issued any additional bonds or preferred stock or sold common stock at less than \$250 a share. Mrs. Taussig agreed to remain as Director in the West Disinfecting Company, and neither to enter a rival business nor to allow the name of Taussig to be used in any company manufacturing similar material.

According to a financial statement to the appraiser, the West Disinfecting Company has a capitalization of \$250,000 of which only \$148,000 had been issued in stock. Mr. Taussig's holdings constituted a controlling interest. The surplus of the company was valued at \$113,523, and the declared dividends for the past six years were: 1906, 10 per cent.; 1907, 15 per cent.; 1908, 5 per cent.; 1909, 10 per cent.; 1910, 10 per cent.; 1911, 15 per cent.; and 1912, 10 per cent.

Among the deductions of \$2,760 made from the total estate was \$2,000 for losses of Herman Mandelbaum. The deductions did not include funeral expenses, as Mr. Taussig's body was not recovered after the sinking of the Titanic. Under his will Mr. Taussig left five shares of the West Disinfecting Company to his daughter, Ruth Taussig, and the remainder of his estate to his wife, Mrs. Tillie Taussig, of 717 West End Avenue.

# A PROMISING FUTURE

*Always keen to broaden our horizons and offer the best, at West things are constantly evolving and we are looking towards the future...*

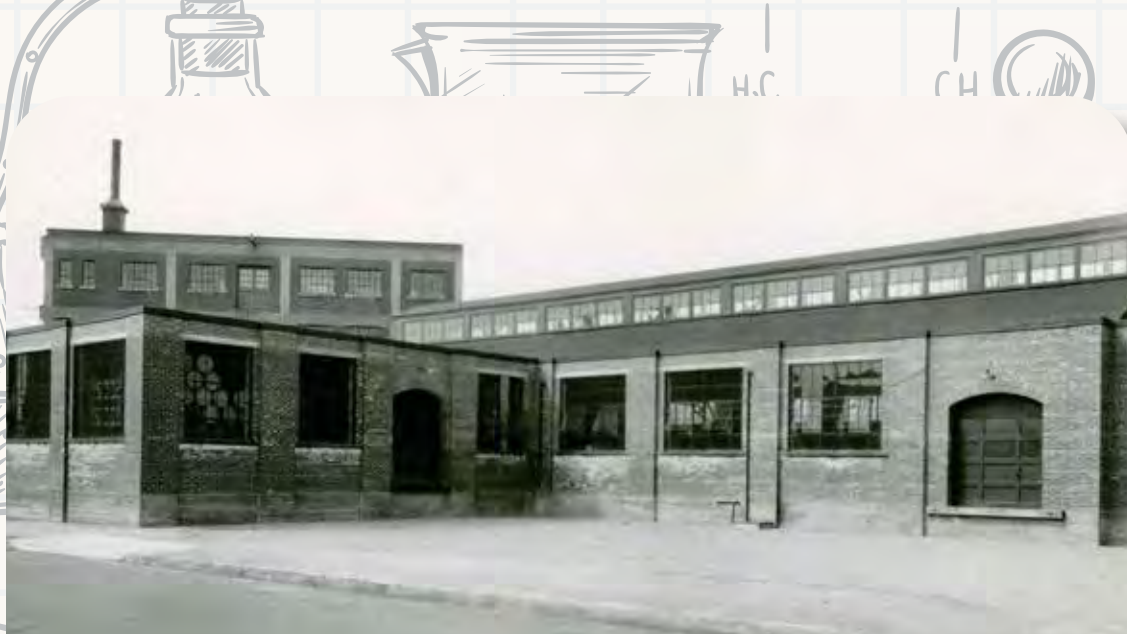

## **Our products**

- The development of new products to meet the needs of each industry we serve is part of our daily life.
- Ecologo, OMRI, Quebec Vrai, NSF, DIN, NPN certified products... Many details that make the West Penetone difference and that are a guarantee of quality for our customers.
- West Penetone has also formulated a unique industrial degreaser, available in a complete range depending on the environment, Citrikleen®. The Citrikleen formula is based on one key element; D-limonene. When citrus fruits are pressed, the oil is extracted from the rind. This oil is separated from the juice and distilled to recover natural citrus oils called D-Limonene.
- In the United States, the reputation of the Penair® line of cleaning products is well established. After decades of providing solutions for the US military, Penair remains a flagship product line and is featured on many authorized product lists.
- West Penetone has made its mark in Western Canada thanks to its numerous products intended for the petrochemical industry. With its expertise and state-of-the-art technologies, West collaborates on many large-scale projects, carving out a place for itself in this very special sector.
- Finally, in Eastern Canada, West Penetone is now a reference for cleaning and disinfecting in the food industry and the farm sectors. The strength of our team of technicians, the efficiency of our products and the reputation of our support documentation are the envy of the competition!

## **Our management**

- The Montreal and Edmonton plants have made great efforts to identify raw materials that should be replaced due to their health and environmental impacts.
- West Penetone relies on electronic versions of its documents and discourages unnecessary printing. All the documentation intended for our customers is also available via our website. All the paper nevertheless used in our offices is recycled by a specialized firm.
- Over the last 2 years, the company has invested 6 million dollars in our manufacturing facilities to optimize energy savings, implement sound wastewater management and meet the most stringent fire codes.
